

# 3D Streaming **MEDIA BOX**

## FRONT END

### Homepage

This web application streams audio/video from multiple miniature screens, simultaneously, on the surface of a 3Dimensional box. The Media Box rotates at every angle and even simulates multiple physical properties. You can rotate, spin and even throw it using the mouse. To watch several videos at the same time you should pause the running video and start a new one on the other screen by simply clicking on the name of the chosen video. DreamSoft can customize this product to make all 6 videos run at the same time without pausing. The user will only put a "tick" next to the chosen video to enable sound in it. Button "Reset" will move the box to its initial position and you will face the surface of the box with the first video.

## BACK END

### Videos

This part allows uploading new videos, writing and editing descriptions of the videos. To upload a video, please click on **"Browse"** to choose the video, then add the description of it into the field **"Description"** and click on **"Add new video"**. You can upload up to 6 videos. To edit the description, click on **"Edit"** and you will be moved to a box where you can edit the text. After editing click on **"Save changes"**. If you wish to delete a video just click on **"Delete"**.

### Settings

This part allows changing administrator's e-mail, login and password. Please do not forget to click on **"Save settings"** button.
